

LED Dimmer Installation

- Connect the **Black** wire from the LED dimmer module to a good chassis ground.
- Connect the **White** wire from the LED dimmer module to the gauge lights.
- Connect the **Purple** wire from the LED dimmer module to either +12V switched power or the vehicle's dimmer switch.

Caution: Only connect the dimmer white wire to the gauge lights. Having another power source connected to the gauge lights (along with the dimmer white wire) will damage the dimmer module.
